## PROFILE

Flutter Engineer with 4+ years of professional experience and 15+ apps shipped to the App Store, Google Play and Huawei AppGallery. I build scalable, maintainable mobile apps with Clean Architecture and BLoC/Cubit, from complex multi-step flows and real-time features to secure, regulated fintech products. I work closely with designers, product managers and backend engineers to take features from technical design to store release, integrating REST APIs, Firebase, payments and third-party services along the way. I care about quality: I write unit and widget tests, review code through pull requests on GitHub, document my work, and monitor app health and performance with Crashlytics, Sentry and Flutter DevTools. I ship through CI/CD with GitHub Actions, Fastlane and CodeMagic, and use AI-assisted development (Claude Code) daily, with every change reviewed and tested before release. Based in Berlin and available immediately.

## PROFESSIONAL EXPERIENCE

**Flutter Developer,** *Al Almiya Alhura* 09/2024 – Present

- Own complex features end-to-end, from technical design to store release, working with designers, product managers and backend engineers across a three-app delivery ecosystem (customer, vendor, driver).
- Defined the architecture and coding standards across apps (Clean Architecture, BLoC/Cubit) so that complex, multi-role features stay maintainable and testable.
- Write and maintain technical documentation (READMEs, architecture overviews, API integration notes and onboarding guides) so new developers can contribute quickly.
- Integrated payments (card checkout and Apple Pay), Firebase, FCM push notifications and analytics. Fixed race conditions in the payment state flow to make checkout reliable, contributing to a 15% increase in user retention.
- Monitor app health after each release with Crashlytics analytics, triaging crashes and performance regressions.
- Use Claude Code with project instructions and Figma MCP to speed up design-to-code work. All generated code is validated through review, static analysis and tests.

**Flutter Developer,** *Neop* 11/2022 – 09/2024

- Worked in a Scrum team with product managers, QA and a Scrum Master, taking features from sprint planning through QA verification to release.
- Implemented app features and integrated RESTful APIs and third-party services to improve functionality and user experience.

## PROJECTS

**Rakeez — Fintech Platform**

- Secure fintech application for issuing debt instruments and Sukuk, built in a regulated environment.
- Implemented secure authentication and sensitive-data handling with a focus on security, data protection and regulatory compliance, including secure token storage, biometric login and session timeout.
- **Available on**: App Store , Google play , App Gallery

**Tamm Order**

- Designed and developed a scalable, multi-sided delivery platform (customer, vendor, driver) with end-to-end order lifecycle management, real-time location tracking, and seamless communication between all parties.
- Led the development of a Lieferando-style delivery ecosystem with three integrated applications, optimizing the full delivery pipeline from order placement to fulfillment with real-time tracking and role-based interactions.
- **App Store** : Client , Provider , Driver

- **Google Play** : Client , Provider , Driver

### All-In Trade — Marketplace Application

- Mobile marketplace enabling users to buy and sell products across multiple categories.
- Implemented advanced filtering, in-app chat, and seller communication.
- **Available on**: App Store , Google play

### Schooly — School Supplies E-Commerce App

- Mobile commerce app that brings schools and their required supplies together in one place, letting parents browse by school and purchase uniforms and back-to-school essentials.
- Built school-based catalog browsing, product filtering, cart, and checkout flows with a clean, bilingual (Arabic/English) UI.
- **Available on**: App Store ,Google play

### Shamikh — Equestrian Services Super App

- All-in-one equestrian platform bringing the entire horse-care ecosystem into a single app: pharmacies, veterinary hospitals and clinics, stores, riding academies, and stables.
- Built a modular, multi-section architecture in which each service category runs its own discovery, booking and ordering rules, unified under a shared order and services state management system.
- **Status**: (TestFlight ), launching soon

### EZ Booking — Booking Platform

- End-to-end booking solution for salons and freelancers with real-time availability.
- Designed intuitive UI/UX to optimize discovery and booking flows.
- **Available on**: App Store , Google play

### Seen — Social Media Management Platform

- A brand growth and customer engagement platform for managing **social media channels**, scheduling posts, and tracking performance.
- **Available on**: App Store , Google play

## SKILLS

- **Flutter & Dart:** Dart, Flutter, asynchronous programming (Futures, Streams), widget lifecycle and rendering, animations, performance profiling (Flutter DevTools)
- **Architecture:** Clean Architecture, BLoC/Cubit, feature-based modular structure, SOLID, design patterns, design systems and reusable components
- **Testing & Quality:** Unit, widget and golden tests, static analysis and code review
- **AI-First Engineering:** Claude Code, agent project instructions (CLAUDE.md), MCP integrations (Figma), context management, reviewing and validating generated code, GitHub Copilot
- **Platform & Integrations:** REST APIs, Firebase, FCM push notifications, payments (card, Apple Pay), secure storage, deep links (App Links / Universal Links), Google Maps, real-time (Socket.IO, Pusher, SignalR), Agora video, Crashlytics/Sentry
- **CI/CD & Tooling:** GitHub Actions, Fastlane, CodeMagic, Git/GitHub, Jira, Figma
- **Also:** Kotlin/Swift, Java, Node.js ,C#

## EDUCATION

**B.Sc. in Bioinformatics,** 09/2018 – 06/2023
*Faculty of Computers & Information Sciences, Mansoura University* Mansoura, Egypt

## LANGUAGES

German — B2

English — Advanced

Arabic — Native
